

June Men's Health Awareness

First and foremost, Happy Father's Day from all of us at RST-SANEXAS to all of YOU! In honoring the men in our lives, we want to make sure you are taking good care of yourselves while you are also treating your patients. You are our HEROS!

In an online survey conducted by Cleveland Clinic among 1,174 US males 18 years or older (2019 Cleveland-Clinic-MENTION-It-Survey-Results *Men will do Almost Anything to Avoid Going to the Doctor*). 65% of men avoid seeking medical attention because they say they are too busy, believe it will get better on its own, or they feel it is a sign of weakness. Download the study for more information about men's health www.clevelandclinic.org/MENTionIt. In the study, Cleveland Clinic found that 72% of the men they surveyed would rather do "household chores" than visit you regarding their health issues or annual physicals. Really??!! Their delay in visiting you when they have a medical problem and seeking your medical expertise/treatments may present greater health concerns. Workplace related injuries, weekend warrior mishaps, diabetic issues, and urogenital conditions are just a few men's health problems you are most likely treating in your practice. Establishing an effective treatment program can not only improve their medical condition but also reduce missed family time and work schedules. Encouraging the importance of seeing you on a consistent basis is not a sign of weakness but motivation to improve their overall health and well-being. You have the answers to solve a man's reluctance to visit you when you can offer him a viable treatment program using RST-SANEXAS - Series neoGEN® device. He doesn't have to "tough it" out any longer because you can give him HOPE.

The RST-SANEXAS neoGEN® device provides excellent pain management, circulation improvements, and better rehabilitation outcomes in a safe, effective, non-pharmaceutical, and non-invasive way. Patients seek your medical help to reduce pain and regain a better way to live their best lives. Depending on the patient's physiology and lack of reparative energy in their bodies, treatment is cumulative and may not be noticeable until weeks later. The length of sessions will depend on your re-evaluation of the patient and his feedback reporting pain relief, improved sleep, increased activity and better balance, and reduced need for pain medication, etc. It normally takes individual treatment times ranging from 15-30 minutes per session 2-3 times per week over a period of time. Realistic treatment expectations and recovery time will need to be discussed based on the patient's conditions and the length of time he has had the health condition or injury.

With RST-SANEXAS neoGEN® quantum-based Electric cell-Signaling Technology (EcST), together we can make a difference in both men's (and women's) lives. Visit our RST-SANEXAS neoGEN® devices on www.rstsanexas.com/neogen

Take care and thank you for all that you do!

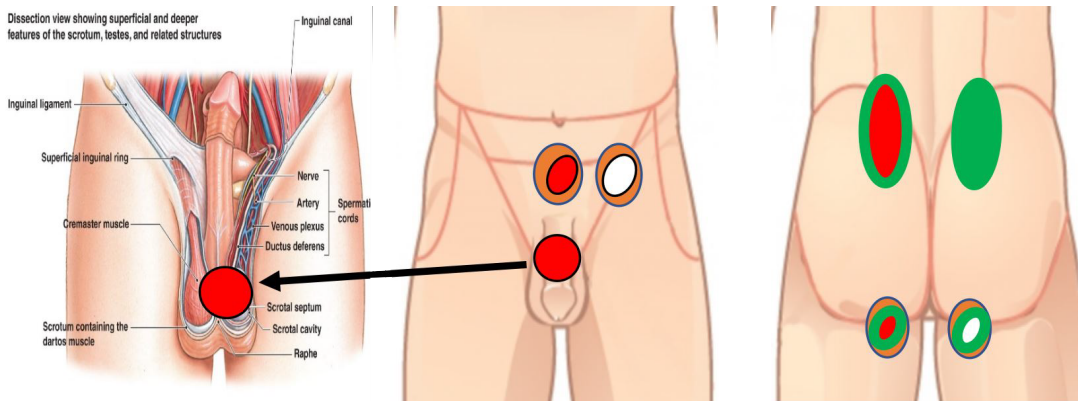

Post Vasectomy Pain Syndrome

** Please keep in mind that this placement does not ONLY apply to vasectomy patients.
This placement design can be used for other urogenital or radiating symptoms.

This approach is utilizing carbon and cup electrodes for a coning effect and wider field. You can move the electrodes to direct your focal point to whichever area is your primary concern.

This approach is utilizing carbon, adhesive and cup electrodes for a coning effect, a wider field and a 3- part circuit. You can move the electrodes to direct your focal point to whichever area is your primary concern.

Pudendal Nerve Pain – Bladder Associated with Bladder Lift

You will need a 5-way cable in order to mix electrodes, a wider electrode in the back to a smaller one up front cones the energy and puts more focus locally in the front. You can still use all cups and achieve that by spreading them farther apart in the back.

- Rectangle or Oval Carbons
